

MONTHLY UPDATE - AUGUST 2023

This update includes monthly performance and risk data for a range of multi-asset funds to provide market context to charity management teams and trustees as they review and evaluate their investment portfolios. This list includes funds that are commonly used by charity investors and does not reflect our views on any of these funds or investment managers. It does not reflect our recommendations regarding any of these funds.

5 YEAR RETURN FOR MULTI ASSET FUNDS*

Source: Morningstar Direct to 31.08.2023 net total returns in GBP.

Returns for multi-asset funds are shown as a median for funds with performance data available for at least 5 years. Funds included in the calculation are marked with * in the table below.

DEFINITIONS

STANDARD DEVIATION (ANNUALISED)	It is most appropriate for measuring risk. It is a statistical measurement of dispersion about an average, which depicts how widely the returns varied over a certain period of time. When a fund has a high standard deviation, the predicted range of performance is wide, implying greater volatility.
SHARPE RATIO	The Sharpe ratio (also known as reward-to-volatility-ratio) is a measure of the return achieved above the risk-free rate per unit of risk undertaken. The higher the Sharpe Ratio, the better the fund's historical risk-adjusted performance.
VALUE AT RISK	The potential loss in value of a traded portfolio over a defined period for a given confidence level (99% in this report). E.g. If a bank has a £100 million traded portfolio and has a daily VaR of 3% for a 99% confidence interval, it means that there is a 1% chance they could lose 3% or more of their portfolio over a daily basis.
ESG RISK SCORE (ENVIRONMENT/ SOCIAL/ GOVERNANCE/ UNALLOCATED)	The asset-weighted average of the Company xxx Risk Scores for the covered corporate holdings in a portfolio. Company xxx Risk Scores from Sustainalytics measure the degree to which a company's economic value may be at risk driven by xxx factors. The xxx risk represents the unmanaged xxx risk exposure after taking into account a company's management of such risks. The xxx Risk Scores are displayed as a number between 0 and 100, though most scores range between 0 and 25.
PRODUCT INVOLVEMENT	The Morningstar Portfolio Product Involvement metrics measure a portfolio's exposure to involvement in a range of products, services, and business activities. The metrics are holdings-based calculations that use company-level analytics from Sustainalytics, a leading ESG research provider. Further information can be found on this website. <u>https://www.morningstar.com/content/dam/marketing/shared/research/methodology/812380_PortofioProductInvolvement.pdf</u>
FOSSIL FUEL INVOLVEMENT	The percentage of the fund's long-only assets that is exposed to corporations that make any revenue (>0%) from fossil fuels. Companies involved in fossil-fuels may derive revenue from one or more of the following activities: thermal coal extraction, thermal coal power generation, oil and gas production, oil and gas power generation, and oil and gas products and services.
